EDUCATION

Williams College – Williamstown, MA	Graduating June 2027
Major: Computer Science and Mathematics	Honors: Dean’s List
Aquincum Institute of Technology – Budapest, Hungary	Spring 2026
Study Away Program	

Relevant Coursework: Distributed Systems, Storage Systems, Algorithms Design and Analysis, Data Structures and Advanced Programming, Computer Organization, Mobile Software Development, Foundations of AI, Data Science, Discrete Mathematics, Linear Algebra.

TECHNICAL SKILLS

Programming languages: Python, C, Java, Golang, JavaScript, PHP, Kotlin
Distributed Systems & API: Apache Kafka, Temporal, gRPC, GraphQL, OpenTelemetry
Web & Frameworks: Node.js, React.js, Django, Ember.js, HTML/CSS
Data, Tools & Observability: SQL, Splunk, Git/GitHub

EXPERIENCE

LinkedIn , Mountain View, CA	May 2026 - August 2026
<i>Software Engineering Intern</i> - Built LinkedIn Business Platform's checkout-abandonment remarketing pipeline end-to-end in Java from Kafka event ingestion through a durable Temporal workflow to recovery emails in members' inboxes, restoring follow-up for ~1M weekly checkout abandoners and ~\$21M/yr in missed revenue. - Diagnosed and fixed a cross-data-center race condition that could start duplicate workflows and duplicate emails for the same member; contributed the fix to a shared internal workflow library so every team building on Temporal inherits the protection.	
Intuit , Atlanta, GA	May 2025 - August 2025
<i>Software Engineering Intern</i> - Architected and deployed a multi-region, high-availability Mailchimp SMS link-shortener service on Google Cloud Platform, reducing response time for 1M+ users worldwide. - Designed and optimized Application and Network Load Balancers to distribute traffic across multi-regional backends, improving performance and lowering latency. - Engineered a backend system to detect and classify bot traffic across 1B+ SMS link clicks with 95%+ accuracy, leveraging Go and HTTP request metadata, improving analytics accuracy and reducing irrelevant traffic by 10%. - Executed a multi-stage Splunk search pipeline for an SMS link shortener service, using Search Processing Language (SPL) to extract and transform logs and response time metrics across all countries, enhancing performance monitoring, troubleshooting, and scalability.	
Equity Bank PLC , Kigali, Rwanda	November 2021 - August 2023
<i>Customer Onboarding & Fintech intern</i> - Selected as the best performer from a pool of 46,000 high school graduates to engage in a dynamic 21 months internship Program across various departments at Equity Bank Rwanda Plc, focusing on Digital Payments and Marketing. - Leveraged analytical skills to evaluate client needs and financial trends, increasing bank deposits and loans by over \$50,000 and \$30,000 respectively, surpassing targets by 150%. - Mastered advanced banking software to manage and track daily interactions with 20 customers, transitioning over 30 clients monthly to online platforms while ensuring accurate and compliant financial services.	

PROJECTS

Live Captioning System - Engineered a production-ready real-time speech-to-text backend using FastAPI and WebSocket streaming, achieving sub-500ms latency, 95%+ accuracy, and supporting 3 languages with 10+ concurrent users. - Integrated Vosk speech recognition with custom per-client audio processing, confidence scoring, and robust error handling for reliable live transcription across multiple sessions. - Optimized audio signal processing using NumPy for 16kHz sampling, chunked processing, and real-time quality assessment; implemented multi-format caption exports (TXT, SRT, VTT) with accurate timestamps.
College Lost & Found Hub - Developed a full-stack web platform to streamline lost-and-found item recovery on college campuses, featuring geolocation-based search, interactive maps, and mobile-friendly UX tailored for academic environments. - Built a scalable backend using Go and PostgreSQL with PostGIS to support high-performance radius-based item searches, optimized with strategic indexing, structured logging, and error handling for maintainability.

ACTIVITIES

Google Developers Group	September 2024 - Present
<i>Organizer</i> - Organized workshops on Google Cloud, Android development, and modern web frameworks, along with hackathons and coding study jams. - Arranged alumni panels, interview prep sessions, and portfolio workshops to connect students with real-world career guidance.
